

2.6 S-26 Type 1 Cold Plastic Road Marking(Traffic Coating)

SOLVENT SOLUBLE

General application instructions

S-26 Type 1 Cold Plastic Road Marking is a heavy duty, extremely durable road marking plastic designed for the harshest possible traffic conditions under all conditions i.e. desert, arctic, freeway, motorway and runways in fact virtually anywhere.

It is not a conventional road marking product and can be applied in a “cold” state using no additional pre-mix or heating when applied.

There are 2 grades (Please specify):

- Bitumen
- Concrete

Application Instruction:

Important: See our Preliminary and General (P&G) Notes

A non-skid version can be obtained but this product cannot be sprayed. Normally the non-skid aggregate is spray applied into the wet coating.

Allow 1 to 2 hours depending on temperatures before opening to traffic.

NOTE:When applying over face brick driveways always prime with S-26 Stabilizing Primer before applying the S-26 Type 1 Cold Plastic Road Marking.
